> Hi, I have scientific image as idl save file, I want to plot line on it then I want to plot the intensity of this line at every pixel, how can I do it?

thanks, when I try to plot two lines, the first point of second line start from the point of first line as Mark the two end points of the profile.

From: (113, 276)

To (452, 440)

Mark the two end points of the profile.

From: (452, 440)

I want to choose the start point of the second line, how?
