Yes, I would normally recommend just trying to open the file and catching the error if it fails, but, as you noted, it actually crashes IDL:

```
IDL> id = ncdf_open(filename)
```

```
Assertion failed: (0), function NC4_open, file nc4file.c, line 2696.
```

```
Abort trap: 6
```

Are your files netCDF 4 files? You can use H5F_IS_HDF5 if you don't want pre-4 netCDF files:

```
IDL> help, h5f_is_hdf5(file_which('ncgroup.nc'))
```

```
<Expression>  LONG    =      1
```

```
IDL> help, h5f_is_hdf5(file_which('sample.nc'))
```

```
<Expression>  LONG    =      0
```
