
Subject: Continuous check for new files and processing possible?

Hi folks,

I'd like to do the following. My application should check every second for new files, read the content (csv), process it, display it (maybe inside a widget_window?) until a button is pressed. Unfortunately, there is another software that runs in parallel, produces those files and may 'steal' the focus.

Maybe somebody had a similar problem and can help?

Thanks in advance

Chris
