Hello! Is it possible to pass an array of color values into polyfill? The documentation on the color keyword says it can accept a vector, but I haven't been able to figure what this vector should look like yet. I'm trying to eliminate a loop where I draw each polygon individually. Polyfill has the ability to draw multiple shapes in one call, but if I can't give each a unique color it isn't terribly useful for me.

Thanks!
