Subject: xloadct & stuff

Hi everybody.

I'm quite disappointed with the 4.0 -> 5.0 upgrade
in terms of compatibility. Widgets look differently than
before, messages about obsolete keywords (will I have to read
them for ever..?) and a lot of unaccounted 'program caused arithmatic
error' bla bla stuff (even in 'trivial' routines like xloadct !!!)
Furthermore, I run one of my codes that used to work fine ,and
uses only the window,loadct and tvim (user lib routine) command, no
widget applications. When the code is finished , I start xloadct and it
appears but cannot be altered or removed (apparently it just isn't
managed). O yeah, I run HP 10.20.

anybody got any clues ?
cheers
Remco
