Does the error message really contain the string "fnameo[i]"? If yes, then this the error message must stem from IDL, not from the OS.

What happens if you replace the line

```
| cmd='awk -v var="$i" "{print $var}" ' + fname[i] + ' > ' + fnameo[i]  
by  
| print,'awk -v var="$i" "{print $var}" ' + fname[i] + ' > ' + fnameo[i]  
?
```

Heinz
