---

I have a system of (momentum) equations in cylindrical coordinates:  
(r,theta,phi)

$\rho^*(dv/dt + (v \cdot \nabla)v) = A(r, \theta, \phi)$

where the velocity  $v(r, \theta, \phi)$  and  $A$  are vectors and  $dv/dt$  is the partial derivative wrt time.  $\nabla$  is the gradient.

I am trying to find the steady state solution to the equation  
 $(v \cdot \nabla)v = A$ .

I have tried different simple methods but nothing converges. Any suggestions .

Thanks

Jay
