```

Thanks for pointing me to polyline - that speeds up my test case by about a factor of 4 (still a lot slower than direct graphics)

PRO test

IRESOLVE

```

;create some dummy data
x = replicate(0.,11,200)
y = x
FOR i=0,199 DO x[*,i] = FINDGEN(11)
FOR i=0,199 DO y[*,i] = RANDOMN(seed,11)

```

```

;plot in direct graphics
st=SYSTIME(/SECONDS)
plot,[0,10],[-5,5],/nodata,yrange=[-5,5],ystyle=1
FOR i=0,199 DO oplot,x[*,i],y[*,i]
PRINT,SYSTIME(/SECONDS)-st

```

```

;plot in function graphics 1
st=SYSTIME(/SECONDS)
w = window()
w.REFRESH, /DISABLE
p = plot([0,10],[-5,5],/nodata,yrange=[-5,5],/current)
FOR i=0,199 DO !NULL=plot(x[*,i],y[*,i],/overplot)
w.REFRESH
PRINT,SYSTIME(/SECONDS)-st

```

```

;plot in function graphics 2
st=SYSTIME(/SECONDS)
w = window()
w.REFRESH, /DISABLE
p = plot([0,10],[-5,5],/nodata,yrange=[-5,5],/current)
FOR i=0,199 DO !NULL=polyline(x[*,i],y[*,i],/data)

```

```
w.REFRESH  
PRINT,SYSTIME(/SECONDS)-st
```

```
END
```

Time taken for these 3 plots

```
IDL> print,!version  
{ x86_64 linux unix linux 8.2 Apr 10 2012      64      64}  
IDL> test  
% Compiled module: $MAIN$.  
0.0013258457  
18.797473  
4.7191000
```
