
Subject: Accessing numbered arrays

Hi,

I have a routine (not mine) that creates numbered arrays as output, i.e., array1 , array2, array3, etc.

I would like to access these arrays sequentially within a for loop.

I am currently using:

```
FOR i=0,n DO temp=scope_varfetch('array'+strtrim(i,2)) .
```

This does the job but is this an appropriate way to do it? From my reading about scope_varfetch it appears to be designed for accessing variables at different levels of the code. This is not what I doing, so I wondered if there was another method.

If a similar question has been answered before I apologise, I couldn't find anything.

Cheers,
Richard
