Don't try to put the indices in the variable name - you'll regret it. Do this instead:

```
col=reform(dep[0,0:499],50,10)
```

then you can access your 'col1' with `col[*,0]`, 'col11' with `col[*,1]` etc.

Otherwise your next question will be "How do I loop through col1, col11...?"

See previous post... <https://groups.google.com/forum/?hl=en#!topic/comp.lang.idl-pvwave/XNn-IBi9DGQ>

cheers,  
greg
