Sorry for not getting back to you earlier. The results are as follows:

```
IDL> filename='E:\netcdf4.nc'  
IDL> print, file_test(filename)  
      1  
IDL> file_id=h5f_open(filename)  
% Loaded DLM: HDF5.  
% H5F_OPEN: unable to open file: Object Name:"E:\netcdf4.nc"  
% Execution halted at: $MAIN$  
IDL> help, file_id  
FILE_ID      UNDEFINED = <Undefined>
```

Is that the problem of my IDL version? Thanks!
