Right now, you have to open the file yourself, set !TEXTUNIT to the unit number and use
TEXTOUT = 5 when calling forprint
<http://idlastro.gsfc.nasa.gov/ftp/pro/misc/forprint.pro>

For example

```
openw,12,'test.dat'  
!textunit = 12  
forprint,indgen(12),text=5  
forprint,indgen(5)^2,t=5,/nocomment  
close,12
```

I should probably just add an /append keyword to make it a little more straightforward. --Wayne
