Am trying to set up and run it on Yosemite, and encountering very similar problems. No path problems, but errors of the sort `numpy.core.multiarray failed to import`, and a segfault upon `>>>import sys`

Happens regardless of whether I setenv `IDL_DLM_PATH \<IDL-DEFAULT\>` or not.
`DYLD_LIBRARY_PATH`, `PYTHONHOME`, and `PYTHONPATH` have been set as recommended.

IDL 8.5
Mac OS X 10.10.5 Yosemite
anaconda python 2.7.10
