Folks,

I just put a vertical colorbar object creation program on my web page. Obviously, it is meant to be used along with other graphics objects in an IDL 5 environment. I haven't tested it extensively. I just built it for some other work I was doing. If you use it and have suggestions, I would like to hear them.

ftp://ftp.dfanning.com/pub/outgoing/idl_examples/vcolorbar__define.pro

Cheers,

David
