I can't open file in IDL if it is tiff file of ENVY

I used this----

```
file = FILEPATH ('cal.tiff', SUBDIRECTORY = ['examples', 'data'])
```

even if it reads it shows no of band =3 and says it is a jpeg file.

Also tried read_tiff but same problem. Also blank window appears when try to display it.

Kindly Help.

Is there any way to get complete band details.
