---

Hi all,

I need to read 500 fits files and do analysis for all this,

So im doing like this,

```
file=file_search('*.fts')
nn=n_elements(file)
for ii=0,nn-1 do begin
img=readfits(file(ii),h)
----
---some analysis----
endfor
end
```

in the analysis part also i have some for loops so the program takes so much time to process this job.

So can anybody let me know whether any other faster methods are there to do this.

thanking you
