Dear All,

I have a structure STR which has 43 tags.

```
IDL> print,N_tags(STR)
```

43

```
IDL> PRINT, TAG_NAMES(STR)
```

```
SLIT_ID XTOP YTOP.....ROW_9
```

I want to print value of ith tag of STR without mentioning the Tag name. Can any one help??

can I do something like this?

```
IDL> print,STR.(ith_tag_name)
```
