I'm not sure what it really means, but the netCDF C header defines the
following:

#define NC_SYSERR (-31)

That seems pretty vague. Does the file exist? Is it really a netCDF file?

Update: I tried to open a non-existent file:

IDL> id = ncdf_open('test.nc')
% Loaded DLM: NCDF.
% NCDF_OPEN: Unable to open the file "test.nc". (NC_ERROR=-31)
