Hi,

Thank you for your answers.
I installed Xquartz and it works when I use idlde with the licence I get trough a VPN.
If I used idl (another version) from the shell, I have the following message

IDL> plot,[0],[0]
No matching pixelformats found, perhaps try using LIBGL_ALLOW_SOFTWARE
Abort trap: 6

This problem was reported so I might resolve it by myself. I will come back if not

Cheers,
Miguel
