Hi all,
     I have one image of say image1 4096 by 4096 and the valid data in this is 3400pixels in diameter.

Then I have some 500 images of different size say image2 3468 by 3468,....3458 by 3458, etc the valid data is of 3400 pixels in diameter

now i need to multiply image 1 * image 2 that is i need to get the multiplication done for the valid data only.

please let me know if you have some ideas.

thanks
