Dear all,

I'm trying to automatize the download of files from the internet and, in order to speed up the process, I use the IDL_IDLBRIDGE to download 2 files at the same time.

However, when I put the download in a crontab I get the following error (or when I execute the command from a remote machine) :

```
% Compiled module: SCARICO_12.  
% Loaded DLM: IDL_IDLBRIDGE.  
/usr/local/bin/wget ftp://ftpprd.ncep.noaa.gov/pub/data/nccf/com/gfs/prod/gfs.20  
16121912/gfs.t12z.pgrb2.0p25.f000  
% Restored file: IDL_IDLBRIDGE::EXECUTETIMER.  
% WIDGET_BASE: Unable to connect to X Windows display: :0.0  
% SCARICO_12: IDL_IDLBridge: Unable to establish X Connection.  
% Execution halted at: SCARICO_12      40 /Users/stefano/scarico/scarico_12.pro
```

How can I solve this problem?

Thanks

Stefano
