Subject: CALL_EXT & linux Posted by mallozzi on Mon, 30 Jun 1997 07:00:00 GMT View Forum Message <> Reply to Message

Hi everyone,

Has anyone used CALL_EXTERNAL under linux with the g77 compiler? I compiled, then linked the FORTRAN with

g77 -o test.so -shared \$(OBJS) -lm

with no errors. When I do the CALL_EXTERNAL (which works on IRIX and VMS), I get

/usr/local/rsi/idl_5/bin/bin.linux/idl: can't resolve symbol '__moddi3'

at a WRITE (6, *) statement in the FORTRAN. Anyone have any idesa where that symbol should be defined or what it means (it is not part of my code)?

-bob
