Subject: Change array elements
Posted by smnadoum on Fri, 13 Jan 2017 02:06:26 GMT

Hi IDL users,

I have an array that is [4,3] and I am trying to change the elements in this array to 13. I used:
 print, b, SHIFT(b, 13)
and
 replicate_inplace, b, 13

the first method didn't change the elements to 13, but actually changed the dimensions of the array.
the second one changed the values in the array to 13 without changing the dimensions.

what is a good method to change the elements in an array?
Thanks
