Can anyone help me out with getting the idl-python bridge to work? I have followed the instructions in a post above and I can call python from IDL but I can't call idl from within python .

In Anaconda Python 2.7 if I get:

```
In [1]: from idlpy import *  
Fatal Python error: PyThreadState_Get: no current thread  
Abort trap: 6
```

I'm running idl 8.5.1 on OS X 10.12 with Anaconda Python 2.7.

Thanks!
