Subject: cgPS_Open crash
Posted by Matteo on Sat, 11 Feb 2017 17:58:03 GMT

Hi,

I have been consistently using cgPS_Open / cgPS_Close to save plots in IDL 7.1. I'm now running IDL 8.5 on Mac and issuing "cgPS_Open, file='test.ps' results in:

% Keyword LANGUAGE_LEVEL not allowed in call to: FSC_PSCONFIG::INIT
% Execution halted at: CGPS_OPEN

I have the latest version of the Coyote library and cgPS_Open compiles alright.

Any idea on what's wrong?

Thanks!
