Subject: Get column_labels from widget_table?

I have an application where the column_labels of the table is set due to interaction during the session. Then I use

widget_control, myTable, COLUMN_LABELS=theNewLabels

But then I'd like to copy the table to clipboard at any time and then I'd like to retrieve the column_labels to include these in the copied table, but I cannot find an option to get these out of the system. Not With widget_info and not With widget_control.

Any ideas?
