I would look at the IDL routines for converting between UTC numeric values and ISO-8601 strings

<https://www.harrisgeospatial.com/docs/timestamptovalues.html>

<https://www.harrisgeospatial.com/docs/timestamp.html>

Your strings are not in the ISO-8601 standard but they are very close to it. I think the following commands converts them to ISO-8601

```
IDL> a = ['-2008-05-15 14:14:28', '-2008-05-15 14:14:43', '-2008-05-15 14:14:58', '-2008-05-15  
14:15:13', '-2008-05-15 14:15:28']
```

```
IDL> strput,a,'T',11
```

```
IDL> a = strmid(a,1)
```
