I had the exact same problem as Maegereg and I can confirm the cause of these compilation errors ("Procedure header must appear first and only once", and "Return statement in procedures can't have values") when there is no missing END must be hidden character(s) in the text file containing the source code (which in my case came from Github).

The easiest way of solving this is to open the .pro in Notepad++, change the encoding to ANSI (there is an item in Notepad++ main menu called 'Encoding'), save and close. Then you open it in the IDLDE, click 'compile', and voila, no errors!

Cheers/Guillermo
