I installed ImageMagick on fedora, but when I run program with cgPS_Close this message appear

```
..*****  
,,
```

Message from the cgPS_Close Program:

The requested raster operation cannot be completed unless ImageMagick is installed.

The requested PostScript file has been saved: /home/agamal/1/4pic.ps.

Please see http://www.idlcoyote.com/graphics_tips/weboutput.php for details
about converting PostScript intermediate files to raster files via ImageMagick.
