Hi Chris! That's interesting; I appreciate your follow-up. I haven't done the IDL update yet and now I'm wondering if I messed up when trying to apply the fix you discovered. Maybe I'll try that again. I use both IDL and ENVI so my installation is a bit different (the `online_help_html` file is in directory `/Applications/harris/envi54/idl86/bin/`) but that shouldn't make any difference. Rather than change the old lines, I just commented them out and added the new ones. That shouldn't matter either, though I'll go back and do it again to be sure.
