Hi Ed!

Seems to have been added in IDL 8.5 (or perhaps 8.4.x):

```
IDL> print, !version
{ x86_64 linux unix linux 8.4 Sep 27 2014    64    64}
IDL> defsvs,'!VAR',0,/test
% Keyword TEST not allowed in call to: DEFSYSV
% Execution halted at: $MAIN$
```

```
IDL> print, !version
{ x86_64 linux unix linux 8.5 Jul  7 2015    64    64}
IDL> defsvs,'!VAR',0,/test
IDL> print, !var
      0
```

Cheers,
Louis
