> With a contour plot my data form a circle, I need to know the center of this circle. From the
geometry I know that if I know 3 points I can extract a circle, are there routine or function
something else in IDL that using, reading my data, can give me the center?

Hi,
you might also want to have a look at this article:
http://www.idlcoyote.com/ip_tips/fit_ellipse.html
Cheers,
Helder
