I'm currently working with MODIS data and i've been having some trouble with several aspects of the steps I need to take.

MODIS09GA product include MODIS_Grid_500_2D data and 1km Reflectance Data State QA data. State QA data is a one-dimensional matrix of 28134485, instead of a two-dimensional matrix of 2400 rows, 2400 columns.

However, I don't know the matching between MODIS_Grid_500_2D and 1km Reflectance Data State QA data. Besides, State QA data doesn't have projection information.

Thanks for your reply.
