Hi everyone,

If I have array as `x=fltarr(1,1,50)`, If I want to display it at specific position I write

```
> window,xs=500,ys=1000  
> tvscl,x,300,525
```

My question is how I can save x at this position in new array z, whereas when I write

```
> window,xs=500,ys=1000  
> tvscl,z
```

appear at the same position (300,525)
