Subject: GetPrimaryMonitroIndex getting the wrong index
Posted by LNpellen on Fri, 27 Oct 2017 12:55:05 GMT

I have a dual monitor and prefer the second monitor as the primary and realize that when I use

```
 s=obj_new('idlsysmonitorinfo')
pMon=s->GetPrimaryMonitorIndex()
```

pMon is 0 even though the second monitor is set as the primary. Is this a bug?
