Subject: How to 'fill' legend text with color or outline color text in black?

Hi - I want to include different color text elements in a plot legend (using Coyote graphics). I have the problem of the text not standing out very clearly for particular colors (the color table is fixed so I can't simply pick one with better contrast). What I'd like is to outline the color text in black, more or less equivalent to plotting an open circle symbol in black and then overplotting it with a filled circle symbol to get a colored circle outlined in black. I've played with choosing different types of fonts without success. Is there another approach I might try?

Thanks.
