
Subject: Keywords GS and LIMITS not allowed in TRIGRID

I am trying to specify the grid spacing and limits in the TRIGRID function (1-909R). I am getting an error message that neither keyword is allowed in this function (quite contrary to the documentation it seems). The following are the relevant code and error message I receive. Thanks for any possible guidance.

```
;These arrays contain 74 longitude, latitudes, and geopotentials
bigbox=[15.,-115.,60.,-60.]
xlon = fltarr(nh)
xlat = fltarr(nh)
hght = fltarr(nh)
```

```
;Data assignment statements
```

```
.
.
.
```

```
triangulate, xlon, xlat, tr, b
gridhght = trigrid(xlon, xlat, hght, tr, extrapolate=b $
               ,gs=[1.0,1.0] , limits=bigbox )
```

```
-----Session Output-----
```

```

```

```
IDL> .run test
% Compiled module: $MAIN$.
571201/0000
    68 good values
% Keyword GS not allowed in call to: TRIGRID
% Execution halted at: $MAIN$          36
  FEDORA$DKB200:[SCOTT.PROGS.FIXDATA]TEST.PRO;11
```

If I omit the gs=[1.0,1.0] part, the same error is returned with the word LIMITS in place of GS. If both are omitted, TRIGRID works, but not with the desired grid spacing or limits.
