Subject: Number of commands that can be recalled.
Posted by black on Mon, 26 Apr 1993 13:12:20 GMT

A few months ago I seem to recall that there was some correspondance about the variable to be modified which set how many commands cound be recalled.

I've searched high and low in the current edition of the WAVE manuals but can't find it. Is this an IDL only feature? If not what do I do to modify the number of commands to be recalled.
