Can anyone help me?

I am running in IDL 4.0.1 on VMS and I am now getting program code area full error. I split the subroutine up into little moduals but it still gets the error. The whole program is a GUI to display satellite data and is quite complicated. From the IDL user documentation I don't get enough information to allow me to figure out what else to do. Does anyone have any ideas on this topic.

I also tried the .SIZE command to enlarge the program data area and it doesn't seem to work. I realize that in IDL 5.0 this will no longer be a problem but we are limlited by our operating systme and I don't know when we will be able to update to it.

thanks,
