
Subject: GET_X_ID keyword?

Hi,

While going through the IDL reference guide, I stumbled across keyword GET_X_ID to WINDOW procedure. RSI doesn't list it anywhere else as a keyword (atleast not to my knowledge). Does anyone know whether it is an obsolete keyword that has slipped in to the reference guide?.

They appear to be X server IDs for the window. If that is the case, I can use it to differentiate between windows as X server IDs will be different.

Thanks for any info.
