Dear Users,

Our mailserver has been erratic of late; my apologies if this message has already been posted. I work in a teaching hospital with ADAC Nuclear Medicine systems, using their PegX 3.3 proprietary software running under SunOS. We wish to use IDL for some image manipulation routines. One of the tedious tasks seems to be writing an interface to allow access to the ADAC proprietary image database. Siemens has apparently done this for their ICON system and made it available. Does anyone know if a similar task has been completed for the ADAC software?

Thank you in advance.
