Hi David,

I just got back from Computers in Cardiology (my first time in Sweden - it was great!). If you haven't already tracked someone down, I might be able to help with your image processing stuff. Time/frequency domain applications are one of my main interest areas. Can you give me a bit more info on this?

Also, since I'm now trying to dig my way out in the email category:

You wrote me:

Of course, I'd be glad to have you put it in. It's tough trying to follow this race. If I had to choose now I'd jump to IDL, because of their introduction of the OO stuff. But for my HP workstation I bought PV-Wave, because we have a state-wide license that makes it much cheaper.

Regards,

David
