Hi,
this is an example for one of our own defined symbols.
It is an half filled circle.

On postscript device it's correct, but on screen you'll see only
the half circle, there is no curve around.

I don't know if it is a bug or not.

I got the same results on PC and AIX Workstation.

```
PRO test_psym
; idea for symdefinition F.R.(ICG-3)
  psize = 2
  ang=findgen(31)*12.+0.
  ang=[ang,0.+180.]
  ang=[ang,0.+180.-findgen(15)*12.]
  ang=ang/180.*!PI
  xarr = psize*cos(ang) & yarr = psize*sin(ang)
```

```
usersym,xarr,yarr,/fill
```

```
a = indgen(10)
```

```
plot,a,a,psym=8
```

```
end
```

```
--
```
