
Subject: Problems with the POSITION keyword in map_set

I am trying to create an image of fixe dimension. With a window of fixed size, I would like to use map set to create an map in a fixed and specified subset of this window. For example:

When I use the "POSITION" keyword, the dimensions in pixels of the map are a little off. Does anyone know why and even more importantly, does anyone have a solution.

Thanks,
Frank Monaldo
