
Subject: IMSL/IDL encapsulated postscript; DVIPS translation

Hello all;

I'm trying to insert encapsulated postscript into a LaTeX document; the IMSL/IDL package I'm using comes with the TeX document IMSLIDL_PLOT_DVIPS.TEX and I'm on a VS3100 running VMS5.5-2. The normal DVIPS translator we are using is called DVIALW (Apple Laser Writer?).

Anyway, the translator spews forth entire pages of errors when it tries to turn the .DVI file into a .DVI-ALW file; has anyone had any success doing this? I'm not TeX literate enough yet to solve this problem; I suppose that Donald Knuth is very pleased with this one.

Thanks, I appreciate any help you can offer.
