Dear All,

I have developed a Web-Based Image Processing Laboratory as part of an
MSc I am taking in Remote Sensing & Image Processing which performs its
image processing using IDL and I am making it accessible to anyone in
the hope that perhaps some people may use it and give their comments on
how easy it is to use to me although I am equally happy for people to
just use it for whatever purpose. Due to a limited developement time
there is no on-line help currently but hopefully the interface is
intuitive enough to allow most people to find their way about.

If anyone is interested in looking at it, it can be found at:

http://scud.met.ed.ac.uk/markh/iplab

or alternatively in times of (local) crisis at:

http://scud.met.ed.ac.uk:8000/markh/iplab

Thanks and best wishes,

Mark R Harding.
