
Subject: Extension to IDL REVERSE function
Posted by [fireman](#) on Tue, 10 Aug 1999 07:00:00 GMT
[View Forum Message](#) <> [Reply to Message](#)

I have extended the functionality of the IDL function REVERSE.

REVERSE_N supports index reversal of arrays of up to 7 dimensions. Eight dimensions are not supported due to an already-reported bug in using 8 indices to extract subarrays on some platforms. I have sent REVERSE_N to RSI and requested that it be added to their distribution.

The code may be found at
<http://alumni.umbc.edu/~gfirem1/idl/>

My apologies to those who have seen a post like this before;
I've been having all sorts of trouble getting posts to be
seen outside the home institution!
