Hi all,

is it possible to generate a seperating line in a menu. The only solution I can imagine is to put a desinsitived (menu)button in it. May be you know a better solution?

Thanks again,

Thorsten.

Thorsten,

If I understand the question what you want is a:

```
quitID = widget_button(fileID, Value = 'Quit', Event_Pro='XFImage_Quit',  
/separator)
```

Which in this case puts a seperator above the quit button.

Ciao,

Eric

If you are using the cw_pdmnu procedure, which I think the gurus argue against doing, then adding 4 to the flag value will put a separator above that menu item. This is undocumented in help, but is described in the descriptive comments of cw_pdmnu.pro.

Henry.
