Fine, that's it! Thank you very much! :-)

Regards,
 Thorsten.

Typically, I handle widget destroy events like this with a CLEANUP
routine. I assign this to the top-level base by using the
CLEANUP keyword to the XMANAGER command. By doing this, I don't
care if my widget is killed by the QUIT button or by the user
wielding a mouse. :-)

Cheers,

David

How about using the TLB_KILL_REQUEST_EVENTS option in the Widget_Base
call? Check the online help.
