Hei,

I need a procedure to produce an animated gif. I know that with IDL is possible to put more than one image in a gif file, but how I can specify the looping?

Thanks

Pier Paolo

Unfortunately.. this doesn't give you the full Gif 89a functionality.
I just tried it out.. and got a rather rapid little animated gif.. but
no looping, and no way to set delays etc.

I set out to build a full 89a Write_gif object a while back.. but never
found the time.. (I think I may still have all the documentation here
somewhere) Has anyone written one in the interim? Or should I take a
stab at it?

Wouldn't be hard.. just need to download the specs..
